Why data Augmented is useful?

① In-variance ~ Shift invariance

$x_i \rightarrow y$

rotation ,,

Zoom ,,

Shear ,,

Noise ,,

② Small dataset  $\rightarrow$  Large dataset

1000

10K / 1 Lac

NOTE :- Data Augmentation is very very popular specifically for image dataset

## General Formula

$$\text{Input} = m * n$$

$$\text{Kernel/Filter} = f * f$$

$$\text{Output} = \text{Input} - \text{Kernel} + 1$$

$$\text{output} = 32 - 3 + 1 = \underline{30 * 30}$$

$$32 - 3 + 1 = \underline{30 * 30}$$

Usha Kumari

Usha Kumari

# Padding

Case I :- General Formula

$$\begin{matrix} \uparrow & \uparrow \\ \text{Input} & \text{kernel filter} \end{matrix} \quad n \times n \xrightarrow{k \times k} (n - k + 1) \times (n - k + 1) = \text{Output}$$

$$n = 60$$

$$k = 5$$

$$\text{Output} = 60 - 5 + 1 = \underline{56 \times 56}$$

Noise

0	0	8	0	0	0	0	0
0	1	0	9	8	7	6	0
0	2	-	-	-	-	15	0
0	3	-	-	-	-	14	0
0	4	-	-	-	-	13	0
0	5	-	-	-	-	12	0
0	6	7	8	9	10	11	0
0	6	9	0	0	0	0	0

6x6

padding = 1

$$n - k + 1 = 8 - 3 + 1 = 6$$

Value we put

- ① z
- ② n

Webinar Chat

SO client is essentially saying don't reduce image size

Usha Kumari to Hosts and panelists

UK 1

Urmil Shah to Hosts and panelists

US If we put same value, can the image change?

Output  
= Same

3 participants raised hand

Case 1 :- Padding

$$n \times n \xrightarrow[k \times k]{p=1} (n-k+2p+1)(n-k+2p+1)$$

✓

$$\begin{aligned}
 n &= 6 \\
 k &= 3 \\
 p &= 1
 \end{aligned}$$

$$\begin{aligned}
 \text{output} &= 6 - 3 + 2 * 1 + 1 \\
 &= \underline{\underline{6 \times 6}}
 \end{aligned}$$

padding

$$\begin{aligned}
 n &= 60 \\
 k &= 3 \\
 p &= 1
 \end{aligned}$$

$$\begin{aligned}
 \underline{\text{output}} &= 60 - 3 + 2 * 1 + 1 \quad \underline{\text{valid}} \\
 &= \underline{\underline{60 \times 60}}
 \end{aligned}$$

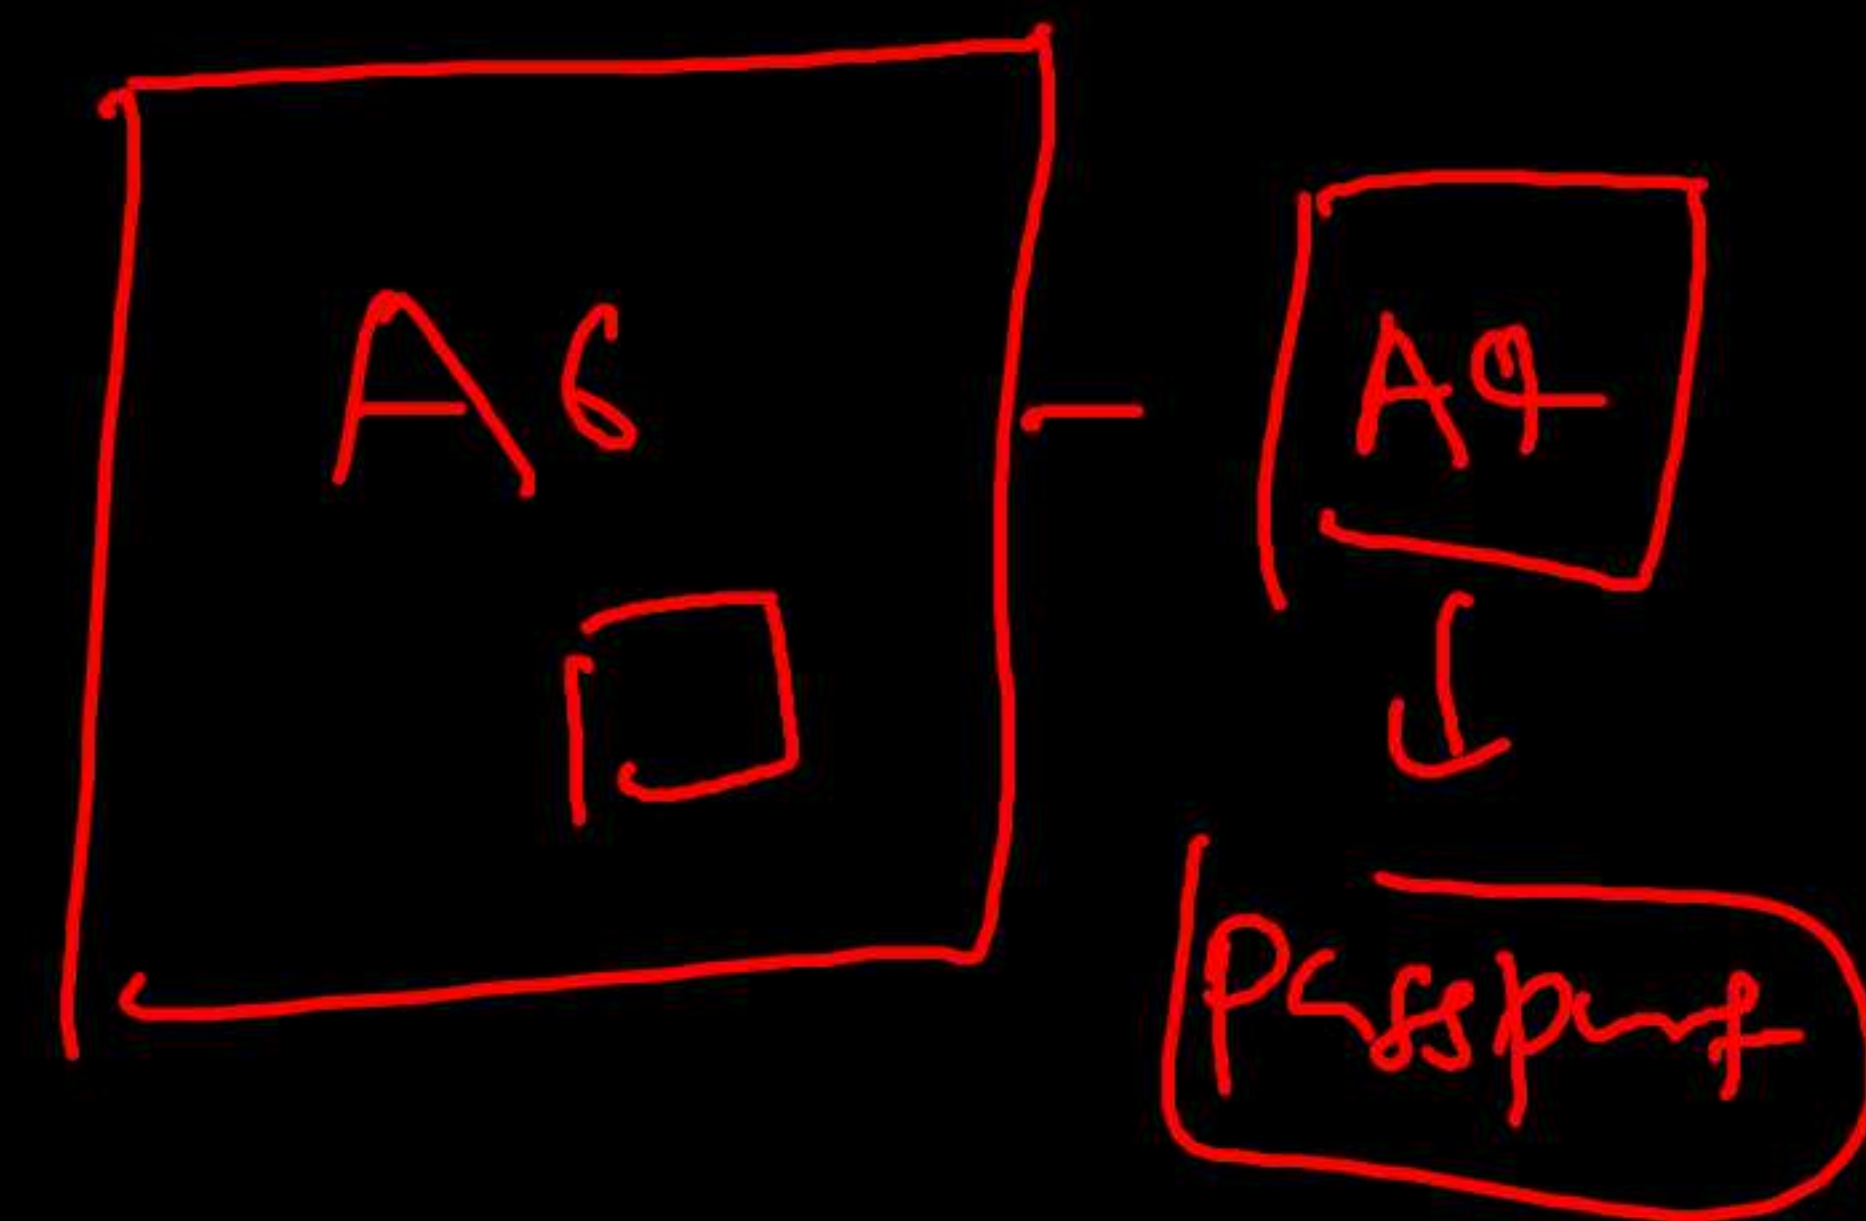

Same

## Strides

Strides  $\rightarrow$  shifted by 1 = stride by 1

Shifted by 2  $\equiv$  Stosde by 2

$S=2$  : Shifting horizontally & vertically by 2 pixels

by default system consider std = 1

You are screen sharing

Stop share

\*

=

3x3

3x3

$$s = 2$$

$$n = 60$$

$$k = 3$$

$$s = 2$$

$$\frac{60-3}{2} + 1$$

$$2$$

$$= \frac{57}{2} + 1$$

$$= 28 + 1$$

$$= 29 \times 29$$

Ques III :- Stride

$$n \times n \xrightarrow[s=k]{s=s} \left( \frac{n-k}{s} + 1 \right) \left( \frac{n-k}{s} + 1 \right)$$

$$\left( \frac{n-k}{s} + 1 \right) \left( \frac{n-k}{s} + 1 \right)$$

Case IV :- This is the best idea to demonstrate

$$n \times n \xrightarrow[p, s]{k \times k} \left( \frac{n - k + 2p}{s} + 1 \right) \left( \frac{n - k + 2p}{s} + 1 \right)$$

$$n = 6$$

$$k = 3$$

$$s = 1 \text{ = by default}$$

$$p = 0 \text{ - NO padding / valid}$$

$$\text{output} = \frac{6 - 3 + 2 \times 0}{1} + 1 = 4 \times 4 = \text{General Form}$$

Case I

Webinar Chat

there is no difference as because by default shift is one and we also giving stride = 1

Usha Kumari to Hosts and panelists

UK yes

yes

Nagarajan K to Hosts and panelists

NK kernel size is a hyperparameter ?

rashmi to Hosts and panelists

R yes

Usha Kumari to Hosts and panelists

UK yes

Sahas Swamy to Hosts and panelists

SS yes sir

Aishwarya Singh to Hosts and panelists

AS can you please go to the code where stride is 2?

Who can see your messages? Recording on

To: Hosts and panelists

Type message here...

$$n=6$$

$$k=3$$

$$S=1 \text{ def}$$

$$p=1$$

$$\text{Output} = \frac{n-k+2p}{S} + 1 = \frac{6-3+2*1}{1} + 1 = 6 \times 6$$

Case II

padding  
cancel

$$n=6$$

$$k=3$$

$$S=2$$

$$p=0$$

$$\text{Output} =$$

$$= \frac{n-k+2p}{S} + 1 = \frac{6-3+2*0}{2} + 1 = 2 \times 2$$

Case III

$$= \frac{6-3+2*1}{2} + 1 = 2+1 = 3 \times 3$$

$$\begin{matrix} n=6 & S=2 \\ k=3 & p=1 \end{matrix}$$
